Summary

Being a recent graduate of AI & Data Science, I consider myself a builder by nature. My technical expertise centers on developing robust Python-based applications while designing and optimizing Generative AI solutions. I have extensive experience in data preprocessing, implementing machine learning algorithms, and fine-tuning deep learning models to deliver scalable business solutions. As an inventive developer, I have a character of not leaving a problem alone until I find a suitable and efficient solution to it, underpinned by technology created with purpose.

Education

M.S. Ramaiah Institute of Technology, Bengaluru <i>B.E. in Artificial Intelligence & Data Science</i>	2023 – 2026 <i>GPA: 7.8</i>
Acharya Patashala Polytechnic, Bengaluru <i>Diploma in Computer Science Engineering</i>	2020 – 2023 <i>CGPA: 9.14</i>

Technical Skills

GenAI & Deep Learning:	LLMs, RAG, PyTorch, TensorFlow, Fine-Tuning, Multi-Agent Architecture
Programming & Frameworks:	Python, FastAPI, Java, JavaScript, React, Node.js, Next.js
Data & ML Algorithms:	Pandas, Data Preprocessing, Scikit-learn, Model Optimization, Analytics
DevOps & Architecture:	Git, Docker, CI/CD, Microservices, Scalable AI Solutions, Agile

Experience

Product Operations & QA Intern <i>Namaah Pvt Ltd (AI Creative Ecosystem – ATLAS)</i>	Mar 2026 – Present <i>Remote</i>
- Collaborated with cross-functional stakeholders to gather requirements, test AI models, and document development processes for scalable generative solutions - Researched emerging AI technologies and fine-tuned quality assurance pipelines to improve the performance and reliability of complex LLM deployments	
Technical Intern – IoT & Data Analytics (On-Campus) <i>Schneider Electric</i>	Aug 2023 – Sep 2023 <i>Bengaluru, India</i>
- Engineered reliable data ingestion workflows, conducting extensive data preprocessing and analysis on physical telemetry data for machine learning tasks - Collaborated with engineering teams to integrate structured analytics, troubleshooting data processing pipelines to ensure scalable implementation	

Generative AI & Python Projects

AI Courtroom Simulator – Multi-Agent System 🔗 🔗	Python, LLMs, GenAI Agents
Developed a scalable Python-based application orchestrating autonomous AI agents, designing and optimizing complex generative AI workflows for structured reasoning	
Emotional Syllabus – GenAI Learning Tool 🔗 🔗	Python, RAG, Prompt Engineering
Built an end-to-end Generative AI application, fine-tuning RAG pipelines and prompts to enhance the performance and reliability of tailored multimodal output	
Cloud AI Anomaly Guardian 🔗 🔗	Python, FastAPI, TensorFlow, Docker
Architected a cloud-native Python backend utilizing FastAPI to deploy machine learning algorithms, delivering highly scalable predictive analytics and microservices	
RoadSafe – AI Accident Detection 🔗 🔗	Python, PyTorch, Computer Vision
Engineered a production-ready deep learning pipeline, conducting rigorous data preprocessing and model troubleshooting to accurately detect real-time traffic anomalies	
Sentiment Analysis 🔗 🔗	Python, NLP, ML Algorithms
Developed a robust NLP application by implementing machine learning algorithms, leveraging advanced data preprocessing and analysis for accurate sentiment classification	

Achievements
