Summary

AI & Data Science graduate with hands-on experience in building backend APIs, engineering data pipelines, and training machine learning models. Built academic and personal projects involving Python, SQL, FastAPI, data analysis, and Docker. Strong foundation in database architecture and software development lifecycles, with growing experience using modern cloud and AI-assisted tools to deploy scalable, data-driven applications.

Education

M.S. Ramaiah Institute of Technology, Bengaluru <i>B.E. in Artificial Intelligence & Data Science</i>	2023 – 2026 GPA: 7.8
Acharya Patashala Polytechnic, Bengaluru <i>Diploma in Computer Science Engineering</i>	2020 – 2023 CGPA: 9.14

Technical Skills

Languages & DBs: Python, SQL, Java, JavaScript, PostgreSQL, MySQL
Web & AI: FastAPI, React.js, Node.js, Spring Boot, Machine Learning, NLP, ETL
Tools & Cloud: Docker, Git, REST APIs, Streamlit, Linux, Software Development

Experience

Product Operations Intern <i>Namaah ATLAS</i>	March 2026 – September 2026 <i>Bengaluru, India</i>
- Developed product operations workflows, support runbooks, and application manuals for the ATLAS ecosystem, translating technical architectures into structured documentation for business stakeholders. - Coordinated with engineering teams to manage application rollout pre-work, tracking module dependencies and standardizing operational processes to ensure seamless cross-functional deployment. - Monitored development progress across application modules, tracking pending tasks and standardizing internal workflows to improve operational efficiency.	
Technical Intern – Home Automation & IoT (On-Campus) <i>Schneider Electric</i>	Aug 2023 – Sep 2023 <i>Bengaluru, India</i>
- Extracted and analyzed structured telemetry data from embedded IoT systems, performing data cleaning to mitigate errors in hardware readouts. - Debugged existing monitoring infrastructure to improve overall system reliability and performance.	

Projects

Cloud AI Anomaly Guardian 	Python, FastAPI, Streamlit, Machine Learning, Docker
- Developed a real-time anomaly detection system using the Isolation Forest algorithm to monitor cloud security, achieving sub-second analytical response times. - Built a highly responsive FastAPI backend to ingest event streams and a Streamlit dashboard to visualize threats, packaging the application in Docker for seamless deployment.	
GuardianVoice – Voice Scam Detector 	Python, Streamlit, Machine Learning, Audio Processing
- Engineered an intelligent voice monitoring system that analyzes audio chunks to detect phone scams utilizing machine learning classification and rule-based heuristics. - Designed an interactive Streamlit dashboard to track incidents, integrating automated spoken alerts to warn users of high-severity threats instantly.	
Emotional Syllabus – Agentic GenAI Tool 	Python, FastAPI, Node.js, NLP
- Built a generative educational tool with a Python backend that extracts key concepts from text and accurately detects emotional context across five mood categories. - Created REST API endpoints to generate engaging narratives and visual prompts, synchronizing the backend processes with an accessible frontend interface.	
AI for Health – Disease Prediction 	Python, SQL, Data Engineering, ETL
- Engineered robust ETL data pipelines to extract, clean, and format medical datasets securely, enabling accurate predictive modeling and downstream analysis. - Architected relational database schemas to manage structured records, writing efficient SQL queries to ensure data quality prior to algorithmic evaluation.	

Achievements

Core Committee Member (Wolfpack): Organized 5+ events for 500+ attendees • **Open-Source Contributor:** Resolved 10+ bugs across 3 GitHub repositories
